QUIZ

Fill in the code so that the statement `echo "Don't print this";` is not executed.

```php
<?php
  echo "Print this!";

  //     echo "Don't print this";
```

👏 You got it!

What must be used to terminate each statement in PHP?

A newline

//

;

👏 Semicolons must be used at the end of each statement in PHP.

When embedding PHP in HTML, what tags must be used to contain the PHP portion of code?

`<?php` and `?>`

👏 When used inside HTML, both opening and closing tags must be used for PHP.

Which is true about dynamic web pages?

A dynamic PHP web page can provide a page that is customized for each visitor.

👏 PHP generates HTML every time it is executed, so it can provide a custom response for each visitor.

When creating a standalone PHP file, what is required?

The filename should end with **.php** and the code must start with `<?php`. No closing tag is required.

👏 You got it!

Which of the following is not equivalent to `echo "Hello";` in PHP?

```
ec ho "Hello";
```

👏 Spaces inside of a keyword will cause it to improperly evaluate.

Fill in the code so that the quote by the creator of PHP is ignored by the interpreter.

```php
<?php
    echo "I love programming!";

    /*

I really don't like programming.
I built this tool to program less so that
I could just reuse code.

    */
```

👏 You got it!
